

Adobe® Acrobat® Elements Server 6.0

*Standardize enterprise document distribution
with centralized Adobe PDF creation*

Adobe Acrobat Elements Server 6.0 enables organizations to centrally deploy and manage Adobe Portable Document Format (PDF) creation capabilities across the enterprise. Flexible, server-based deployment options combined with a Web services API make it easy to integrate Adobe PDF file generation into document-based business processes and existing enterprise applications.

Enable reliable document distribution

Acrobat Elements Server 6.0 enables reliable document distribution by providing a centralized process for creating Adobe PDF documents that leverages existing investments in hardware and software, including Microsoft Office. Users can automatically convert presentations, financial reports, contracts, and more to compact Adobe PDF files and then distribute them to colleagues, clients, and vendors.

- Easily deploy Acrobat Elements Server 6.0 across the enterprise and provide a more flexible alternative to managing desktop software.
- Leverage existing investments in Microsoft Office or other applications by providing easy access to Adobe PDF file creation.

Preserve document integrity

Business users can easily convert documents from common desktop application file formats to high-quality, reliable Adobe PDF files with Acrobat Elements Server 6.0. Adobe PDF, a document distribution standard, preserves the fonts, graphics, images, and layouts of original documents so that anyone can view or print the files with free Adobe Reader® software.

- Preserve the visual integrity of business documents so that they display as intended across a variety of platforms.
- Produce Adobe PDF files that anyone can view or print with the widely available Adobe Reader software; to date, more than 500 million copies of Adobe Reader have been distributed worldwide.
- Apply permissions centrally with 128-bit encryption to help control whether document recipients are allowed to view, edit, or print Adobe PDF files.

- Protect files with passwords to help prevent unauthorized users from opening and viewing sensitive documents.

Deploy and manage a flexible solution

Acrobat Elements Server 6.0 can be quickly deployed across the enterprise and easily integrated into existing applications and document-based business processes, enabling desktop users to create Adobe PDF files automatically without client software. Numerous access options allow organizations to tailor the interface to meet departmental needs. Businesses may also invest in other Adobe document services as their needs evolve.

- Create Adobe PDF files automatically using a variety of access methods—watched folders, e-mail, Web user interface, and Web services.
- Designate Adobe PDF file creation settings from a central location—based on departmental needs—for accessibility, printing, Web viewing, and more, ensuring that Adobe PDF documents are prepared correctly using desired parameters.
- Integrate Adobe PDF file generation into collaborative business processes throughout the enterprise by deploying Acrobat Elements Server 6.0 with other Adobe document services.

Acrobat Elements Server 6.0 is available through Adobe Open Options TLP and CLP licensing programs. Please visit www.adobe.com/openoptions for more information.

SYSTEM REQUIREMENTS

Windows®

- Intel® Pentium® III 500 MHz or faster processor
- Microsoft® Windows® 2000 with Service Pack 4, Windows 2000 Server with Service Pack 4, or Windows XP® with Service Pack 1 (U.S. English)
- 512MB of RAM
- 5GB of available hard-disk space
- CD-ROM drive

Note: Support for the following file types is available only if the software applications (U.S. English versions), obtained separately, are installed on the same server as Acrobat Elements Server 6.0: PS, EPS, PSD, MPP, DOC, RTF, TXT, XLS, PPT, PPS, WPD, JPG, TIF, BMP, and GIF.

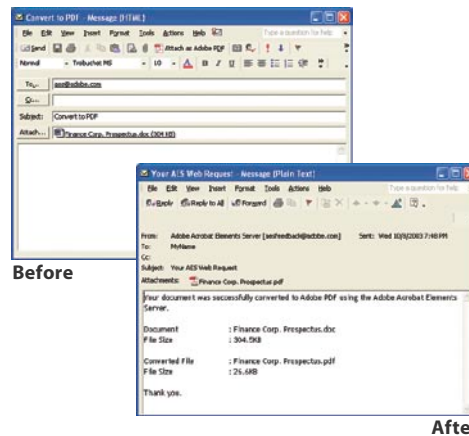

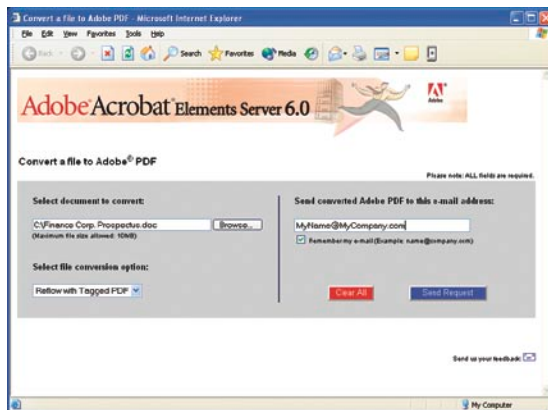

You are responsible for ensuring that you are properly licensed to install and use the supported software applications.
